

Education

Master of Science, University of Basel

Biozentrum

Basel, Switzerland

Sep. 2024 – Jun. 2026 (expected)

Major: Master of Science in Physics of Life (Fellowship)

GPA: 4.78 / 6.00 (based on 4 biology-related graded courses; majority of coursework graded Pass/Fail)

Bachelor of Science in Physics, Lanzhou University (Project 985 in China)

Lanzhou, China

School of Physical Science and Technology

Sep. 2020 – Jul. 2024

Major: Physics (magnetic track) in National Training Base for Research and Teaching Talents in Basic Science Disciplines

Ranking: 4/20 (20 Selected from 52) GPA: 85.25/100

Major Courses: Fourier Optics (89), Computational Physics (100), Methods of Mathematical Physics II (99), Opto-electronic Technology and Applications (94), Theoretical Mechanics, Statistical Physics, Electrodynamics, Quantum Mechanics, Linear Algebra, as well as several interdisciplinary courses in biophysics and structural biology.

Honors and Awards

EPFL Excellence in Engineering Fellowship

EPFL

Jun. - Sep. 2025

Biozentrum Fellowship for Master's Study

University of Basel

Jun. 2024 - Jan. 2026

Excellent Bachelor's Thesis

Jun. 2024

Outstanding Student Scholarship

Sep. 2023 & Sep. 2022

China Undergraduate Physics Tournament (Northwest Region)

First & second Prize

Jul. 2022 & Jun. 2021

Publication

- [1] Zhiping Wang, Tianci Feng, Aiye Wang, Jinghao Xu, An Pan. *Fusion-Based Enhancement of Multi-Exposure Fourier Ptychographic Microscopy*.

* Introduced is MEIF, a nonlinear fusion method to enhance dark-field FPM by optimally leveraging multi-exposure data, surpassing linear HDR and exhibiting strong generalization.

– Accepted and produced by *Advanced Photonics Nexus* in [Link](#). (DOI:10.1117/1.APN.4.4.046001)

- [2] Fannuo Xu[†], Zhiping Wang[†], Zipei Wu, Houyou Lai, Yizheng Liao, and An Pan. *Wide-Field Quantitative Phase Imaging Without Slicing Via Feature-Domain Fourier Ptychographic Microscopy*.

– Accepted and produced by *Optics & Laser Technology* in [Link](#). (DOI:10.1016/j.optlastec.2025.112727)

- [3] Tianci Feng, Aiye Wang, Zhiping Wang, Yizheng Liao, and An Pan. *A Linear-Space-Variant Model for Fourier Ptychographic Microscopy*.

– Proposed linear space-variant FPM model, which better matches the raw data to reduce global artifacts.

– Accepted and produced by *Optics Letters* in [Link](#). (DOI:10.1364/OL.522745)

- [4] Fannuo Xu, Zipei Wu, Chao Tan, Yizheng Liao, Zhiping Wang, Keru Chen, and An Pan. *Ten Years On: A Review of Fourier Ptychographic Microscopy*.

– Accepted by *Cells* on February 8, 2024, accessible via the following [link](#). (DOI:10.3390/cells13040324)

- [5] Yanqi Chen, Jiurun Chen, Zhiping Wang, Yuting Gao, Yhonghong He, Yishi Shi, and An Pan. *Fast full-color pathological imaging using Fourier ptychographic microscopy via closed-form model-based colorization*.

– Accepted by *Advanced Photonics Nexus* on Dec. 2, 2024, at this [link](#). (DOI:10.1117/1.APN.4.2.026001)

- [.] Zhiping Wang, **Bachelor's Thesis**: Exploring Advancements in Slicing-free Fourier Ptychographic Microscopy.

* Instructor: Dr. Hao Jia (Lanzhou University and KAUST) and Dr. An Pan (Chinese Academy of Sciences)

– Summarized some of my work on Fourier Ptychographic Microscopy.

– Achieved an **excellent** rating for my thesis through **oral defense**.

Research/Projects Experience

3D Reconstruction for TVAM 3D-Printed Sample

EPFL EEE Summer Project, Advisor: Felix Wechsler, Dr. Christophe Moser, EPFL

June 2025 – Sep 2025

Lausanne, Switzerland

- Developed a custom multi-slice forward model and inverse reconstruction framework for 3D Fourier Ptychographic Microscopy (FPM) based on the angular spectrum method.
- Replaced traditional voxel-based optimization with implicit neural representations (INR), leading to substantially improved 3D reconstruction fidelity and artifact suppression in simulation.
- Independently built a complete FPM experimental setup – including LED source soldering, optical alignment, and reconstruction code – achieving successful super-resolution reconstruction from real data.
- Implemented defocused multi-slice imaging of calibration samples; preliminary results confirmed feasibility though limited by the short project duration.

Optimal Filtered Back-Projection for Cryo-electron tomography

Master's Project, Advisor: Dr. Ricardo Righetto & Dr. Valentin Debarnot, Biozentrum & DMI in UniBasel Switzerland

Nov 2024–Feb 2025

- * The project's report can be found at the [Report link on Github](#).
- Explored the principles of Filtered Back-Projection and implemented tomographic reconstruction using ODL in simulations by Python.
- Designed and trained an optimal network for filter optimization on Cryo-ET datasets using PyTorch, incorporating total variation (TV) regularization to enhance reconstruction quality.
- Conducted experiments on real datasets (Chlamydomonas sample from EMPIAR-11830), enhancing the details in the reconstruction results.

Research on High-effective Fourier Ptychographic

Research Internship, Supervisor: Dr. An Pan, Pioneering Interdiscipline Center of Chinese Academy of Sciences China

Aug 2023–July 2024

- * The project's result can be found at the [GitHub project link1](#) and [GitHub project link2](#).
- Studied articles related to the principles of Fourier Ptychographic Microscopy and actively participated in experiments to gain insights into the details.
- Discovered that block stitching is a cause of many issues in the field of FPM. Through MATLAB simulations and using Arduino to control the LED array for illumination modulation, progressively expanded the field of view in single imaging (0.2mm-1mm-3.3mm) using an improved collaborative algorithm.
- Noticed some deficiencies in the algorithm. By drawing on the concept of image fusion, successfully utilized existing multi-exposure images for innovative nonlinear stitching, significantly improving the imaging quality.

Above are some selected research projects. For a more comprehensive overview, please visit my [personal website](#).

Skills

Programming:	Proficient in C/C++, MATLAB, Mathematica, Python (TensorFlow, PyTorch, OpenCV, etc.), \LaTeX /Tex
Software:	Familiar with Comsol, SolidWorks, Inventor, Zemax, PixInsight; Proficient in Adobe Illustrator, Photoshops, Visio.
Computing Skills:	Experienced in supercomputing environments for high-performance computing tasks Competent in Linux for system administration and scripting Familiar with CUDA for GPU-accelerated computing

Teaching Experience

School of Physical Science and Technology, Lanzhou University

Teaching Assistant for the Computational Physics Class

Lanzhou, China

September 2021 – January 2022

- Reviewed and graded student assignments, provided constructive feedback to students, and helped teachers with ongoing evaluation.
- Assisted students with course material, answered questions during regular office hours I held or in the class, and conducted supplemental study sessions to enhance students' understanding of complex topics.
- Collaborated with the course instructor to develop educational materials, including presentations and assignments, to improve the overall learning experience.
